

1. Find your misplaced iPhone: You can easily ping your iPhone. To do so, put your Apple Watch in the watch face mode. From there, swipe upwards from the bottom activating the Control Center. Look for a phone icon. Then simply tap the "iPhone" button and listen for your phone ping. You can do this multiple time until your iPhone is found.

2. Screen shot on your Apple Watch. This can be done by pressing the digital crown and the side button at the same time. The screenshot will be saved on your camera roll on your iPhone.

3. Switch into application finding mode. Using glances can take some time and a lot of taps and swipes. So, the next time you find yourself wanting to go to your application list from the watch screen, simply press on the digital crown and scroll to the desired application.

4. SOS: With it enabled, holding in the side button on the watch will prompt the watch to dial the local emergency number, usually 911, along with sending an alert to any person you've identified in your Health Application emergency contacts.

5. Activity Sharing: You can set this up by opening the Activity app on the Apple Watch and tap on the Sharing tab at the bottom. From there, tap on the plus sign at the top-right and add your Contacts who also have an Apple Watch.

6. Personalized messages responses: To do so, launch the Apple Watch app on your iPhone. It's the watch icon on a black background. Once that is open, go to the Messages setting and then select Default Replies to apply your desired changes.

Scroll to the bottom and hit on add reply. Type your personalized message and you are all set. You may want to move it to the top of the default replies by pressing and sliding on the three hash marks on the right side of the screen.

7. Read and clear out your notifications: Swiping down your Apple Watch will give you a list of your notifications.

Periodically I delete these with a hard press on the screen. You will be asked to Clear All. This creates a clean slate.

8. Silencing your iPhone: Cover the watch face with your opposite palm for a few seconds. To turn on this feature, go to your Watch app on your iPhone, again that's the white watch on the black icon, and look for Sound & Haptics and turn on Cover to Mute.

9. Application List View: To do so, press hard on the grid view and you'll see two options: grid and list. Press on list and you'll get a list of applications you can scroll through on the watch face or using the digital crown.

10. Transfer calls, Apple Watch to iPhone: If you receive a phone call on your Apple Watch but would prefer to take it on your iPhone, there's an easy fix without missing the call or further disturbing others. When the call comes in, twist the crown down to find the option called "Answer on iPhone." When you tap that button, it will place the call on hold to give you enough time to grab your phone.
